

## Hearing and Ear wax removal

One top tip that has come out of our recent experience is the new technology kit that hospitals now have for “air suction” clearing of little ears with tiny ducts, as opposed to the traditional syringing – it really is truly brilliant and has made a massive overnight difference to Tessa’s hearing – she now has it done every 3 to 4 months & the TV volume in the play room has reduced from 25 on the scale to 7 – hooray! Most of all, having been recommended to have a hearing aid by several doctors, it has proved to be completely wrong and unnecessary

We would recommend it to anyone with ear wax related hearing problems, young or old – it’s worth the trip to hospital and is available private at Nuffield BUPA hospitals
