Advice Regarding High/a Rise in Temperature in Children Affected by Ectodermal Dysplasia

In conjunction with the Care Plan in place for a child affected by Ectodermal Dysplasia (ED), this letter is to give advice regarding a raise in their temperature due to environmental temperatures rather than the risk of being positive for Covid-19.

We ask that in order to maximise a child's education the following procedure is initially carried out to determine if overheating is the case, rather than sending the child home due to concerns over Covid-19.

Please ensure you use all cooling methods mentioned in the care plan; ensure the fan is on, they are seated away from windows and radiators, place a gel pack under their feet, use a spray water bottle to cool their skin, place a wet cloth around their neck, use a cooling pad, take off a jumper/cardigan/blazer, etc.

Their temperature should begin reducing within an hour if these procedures are followed.

Should their temperature remain high, at this point their parents should be called.
